The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Spaeth in view of Kato and Furuya, of record.

The previous rejection still applies with the addition of Furuya figure 3 who shows a window/cap layer 33 of large bandgap InP material over the absorption layer 32 of low bandgap InGaAs. It would have been obvious to have practiced a similar material scheme as Furuya with groove structure from Spaeth/Kato in order to take advantage of heterostructure window/cap design. Accordingly the new limitations reciting a window layer on each side of the absorption layer is old structure and not convincing of patentability.

Applicant's arguments filed 7/11/05 have been fully considered but they are not persuasive. Arguments "window layer" high bandgap cap layers have been addressed above. Regarding "groove" arguments note again applicant defines a "groove" as an inclined surface as "A" where incident light enters. Spaeth also shows an inclined "groove" surface where incident light enters. Accordingly, applicant's arguments that Spaeth does not show "grooves" is unpersuasive of patentability.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2815

In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
